# About LiveCapture Virtual

Congratulations on your purchase of LiveCapture Virtual™! LiveCapture Virtual is a virtual version of the LiveCapture hardware network appliance. LiveCapture Virtual can be deployed in a highly virtualized data center to monitor east-west traffic moving between virtual machines, or to monitor virtual network functions. Without a virtualized monitoring solution like LiveCapture Virtual, this traffic cannot be monitored and issues between those machines could go unnoticed by IT and network operations teams.

The Capture Engine software on LiveCapture Virtual works in conjunction with Omnipeek, a separate software program required for the monitoring and analysis of the packets captured remotely by LiveCapture Virtual. For detailed instructions on how to view and analyze remote captures from within the Omnipeek console, please see the *Omnipeek User Guide* or Omnipeek online help. For more information on the Capture Engine software, please see Chapter 3, *Capture Engines*.

# What's included

Your standard LiveCapture Virtual package includes:

- LiveCapture Virtual packet capture and analysis software
- Omnipeek
- LiveCapture Virtual User Guide (this guide)

# **Deploying LiveCapture Virtual on VMware ESXi**

# Requirements

- VMware ESXI 5.5 or later
- vSphere client to deploy LiveCapture Virtual OVA

# **OVA Deployment**

- 1. Log into the ESXi/ESX host or vCenter Server using the vSphere Client.
- 2. Select any inventory object that is a valid parent object of a virtual machine, such as a data center, folder, cluster, resource pool, or host.
- 3. Right-click the inventory object and select Deploy OVF Template...
- 4. Select Local file option and then click Choose Files.
- 5. Select the LiveCapture Virtual OVA file, and click Open, and then click Next.
- 6. Specify a unique name and location for the virtual machine, and then click Next.
- 7. Select a compute resource where to run the deployed OVA, and then click Next.
- 8. Review the template details, and then click Next.
- 9. For storage configuration select Thick Provision Lazy Zeroed, and then click Next.
- 10. Map the OVF destination networks with each of their respective source networks, and then click Next.
- 11. Review the **Ready to complete** dialog, and click **Finish**. A new task for creating LiveCapture Virtual appears in the *Recent Tasks* pane. After the task is complete, the new virtual machine is created on the select resource, and now appears as an inventory object in VMware vSphere web client.

# **OVA Disk Configuration**

By default LiveCapture Virtual is configured with a single OS disk (*Hard disk 1*), and a single capture storage disk (*Hard disk 2*). Both of these hard disks can be extended to increase the amount of log storage and cap-

ture storage. Capture storage can also be increased by adding additional hard disk devices to LiveCapture Virtual.

**Note** For ESXI 5.5 and later the largest sized disk is 62TB. The maximum number of disks per VM is 60 (requires 4 additional controllers).

# **Expanding OS storage:**

- 1. Select your LiveCapture Virtual in the Virtual Machines inventory list.
- 2. From the Actions drop-down list, select Edit Settings.

> CPU	8 ~		0
> Memory	16	GB 🗸	
> Hard disk 1 *	100	GB v	
> Hard disk 2	100	GB v	

- 3. Expand the Hard disk 1 size to the new desired size.
- 4. Click OK.
- 5. From the Actions drop-down list, select **Power**, and then select **Restart Guest OS**. On reboot, LiveCapture Virtual automatically resizes the capture partition to the new size.

### Expanding capture storage disk(s):

- 1. Select your LiveCapture Virtual in the Virtual Machines inventory list.
- 2. From the Actions drop-down list, select Edit Settings.
- 3. Expand the Hard disk N size to the new desired size.

> CPU	8 ~	0
> Memory	16 GB ~	
> Hard disk 1	20 GB ~	
> Hard disk 2 *	500 GB ~	
> SCSI controller 0	LSI Logic Parallel	

- 4. Click OK.
- 5. From the Actions drop-down list, select **Power**, and then select **Restart Guest OS**. On reboot, LiveCapture Virtual automatically resizes the capture partition to the new size.

## Adding capture storage disk(s):

- 1. Select your LiveCapture Virtual in the Virtual Machines inventory list.
- 2. From the Actions drop-down list, select Edit Settings.
- 3. Click Add New Device and then click Hard Disk.
- 4. Enter the desired size of the New Hard disk
- 5. Expand the New Hard disk settings and select Thick Provision Lazy Zeroed.

> CPU	8 ~	0
> Memory	16 GB ~	
> Hard disk 1	20 GB ~	
> Hard disk 2	100 GB ~	
✓ New Hard disk *	<u>1000</u> <u>GB</u> <u>~</u>	
Maximum Size	39.34 TB	
VM storage policy	Datastore Default 🗸 🗸	
Location	Store with the virtual machine $\ \lor$	
Disk Provisioning	Thick Provision Lazy Zeroed $$	
Sharing	Unspecified ~	
Shares	Normal ~ 1000	
Limit - IOPs	Unlimited ~	
Virtual flash read cache	0 MB ~	
Disk Mode	Dependent ~	
Virtual Device Node	SCSI controller 0 $\smallsetminus$ SCSI(0:2) New Hard disk $\vee$	
> SCSI controller 0	LSI Logic Parallel	

- 6. Click OK.
- 7. From the Actions drop-down list, select **Power**, and then select **Restart Guest OS**. On reboot, LiveCapture Virtual automatically resizes the capture storage to the new size.

# **Monitoring Traffic**

The following provide a 'Best Practices' for monitoring traffic in a VMware environment with LiveCapture Virtual.

# Monitoring VM Traffic (Standard Switch)

The following instructions will allow you to monitor all VM traffic going across a standard virtual switch. To do so, requires the creation of a new port group on the standard switch to be monitored. By creating the monitoring port group, we will be able to capture all traffic traversing the switch while not affecting the existing infrastructure.

### **Note** To perform these actions you will need permissions to create port groups on existing vSwitches.

- 1. Log into the ESXi/ESX host or vCenter Server using the vSphere Client.
- 2. In the vSphere Client, navigate to the host.
- 3. On the Configure tab, expand Networking and select Virtual Switches.

<ul> <li>Storage</li> </ul>	Virtual switches
Storage Adapters Storage Devices Host Cache Configur	✓ Standard Switch: vSwitch0 ADD NETWORKING EDIT MANAGE PHYSICAL ADAPTERS ····
Protocol Endpoints I/O Filters • Networking	Management Network         VLAN ID:         VMkernel Ports (1)         VM
Virtual switches VMkernel adapters Physical adapters TCP/IP configuration	VM Network ····
<ul> <li>Virtual Machines</li> <li>VM Startup/Shutdo</li> <li>Agent VM Settings</li> </ul>	> Virtual Machines (9)

#### 4. Click Add Networking.

5. In Select connection type, select Virtual Machine Port Group for a Standard Switch and click Next.

Select connection type Select a connection type to create.

#### VMkernel Network Adapter

The VMkernel TCP/IP stack handles traffic for ESXi services such as vSphere vMotion, iSCSI, NFS, FCoE, Fault Tolerance, vSAN and host management.

#### Virtual Machine Port Group for a Standard Switch

A port group handles the virtual machine traffic on standard switch.

#### O Physical Network Adapter

A physical network adapter handles the network traffic to other hosts on the network.

6. In Select target device, click Browse... and select an existing standard switch you wish to monitor.

1 Select connection type     2 Select target device	Select target device Select a target device	o for the new connection		
3 Connection settings 4 Ready to complete				
- neady to complete	<ul> <li>Select an existing</li> </ul>	standard switch		
	vSwitchO			BROWSE
	O New standard sw	itch		
	MTU (Bytes)	1500		
			CANCEL	BACK

7. On the **Connection settings** dialog, enter a unique *Network label* for the new port group. Select the *VLAN ID* drop-down and choose *All* (4095), and then click **Next**.

<ul> <li>1 Select connection type</li> </ul>	<b>Connection settings</b>			
<ul> <li>2 Select target device</li> </ul>	Use network labels to	identify migration-com	patible connectio	ns common to
✓ 3 Connection settings	two or more hosts.			
4 Ready to complete				
	Network label	Monitoring Netv	vork	
	VLAN ID	All (4095)	$\checkmark$	

CANCEL	BACK	NEXT

8. Review the port group settings in the *Ready to complete* page, and click Finish.

<ul><li>1 Select connection type</li><li>2 Select target device</li></ul>	Ready to complete Review your settings selections before finishing the wizard.		
<ul> <li>3 Connection settings</li> </ul>			
4 Ready to complete	Virtual machine port group Standard switch VLAN ID	Monitoring Network vSwitch0 All (4095)	

CANCEL BACK

FINISH

9. Once complete the new port group should appear in the topology diagram of the switch.

Summary Monitor Co	onfigure Permissions VMs Datastores Networks Updates
<ul> <li>Storage</li> <li>Storage Adapters</li> <li>Storage Devices</li> <li>Host Cache Configur</li> </ul>	Virtual switches ADD NETWORKING REFRESH Standard Switch: vSwitch0 ADD NETWORKING EDIT MANAGE PHYSICAL ADAPTERS ***

- **10.** In the topology diagram of the switch, click the name of the port group.
- 11. Next to the *Monitoring Network*, click the horizontal ... (elipsis) icon and select **Edit settings**.
- 12. Select the *Security* page.
- 13. Override the switch settings for Promiscuous mode and select Accept.

#### Monitoring Network - Edit Settings

20. Restart the LiveCapture Virtual.

# **Monitoring External Traffic**

The following instructions will allow you to monitor spanned traffic into your LiveCapture Virtual. This requires the creation of a new standard switch and port group.

**Note** To perform these actions you will need permissions to create a standard switch and port group for monitoring.

- 1. Log into the ESXi/ESX host or vCenter Server using the vSphere Client.
- 2. In the vSphere Client, navigate to the host.
- 3. On the Configure tab, expand Networking and select Virtual Switches.

Summary Monitor C	onfigure Permissions VMs Datastores Networks Updates
<ul> <li>Storage</li> <li>Storage Adapters</li> <li>Storage Devices</li> <li>Host Cache Configur</li> </ul>	Virtual switches     ADD NETWORKING     REFRESH            ✓ Standard Switch: vSwitch0      ADD NETWORKING      EDIT      MANAGE PHYSICAL ADAPTERS

# **Deploying LiveCapture Virtual on KVM**

To deploy an instance of LiveCapture Virtual on KVM (QEMU emulator version 2.5.0 is supported), you can do so directly using the *virt-install* command from the command line or from the Virtual Machine Manager interface.

# Minimum virtual computing requirements

The minimum virtual computing requirements to deploy LiveCapture Virtual on KVM are:

Specification	Requirement
Memory	8 GB RAM
Virtual CPU (vCPU)	4 vCPU (x86_64)
Virtual Storage for Guest Hard disk 1: Hard disk 2:	(Minimum of 120 GB) 20 GB 100 GB
Virtual Network Interfaces	2 vNIC using virtio: • Management Port • Capture Port

# Virt-install deployment from the command line

#### To deploy a LiveCapture Virtual instance from the command line:

- 1. Download the *LivePCA\_Virtual\_KVM\_\*.tar.gz* package from LiveAction to the desired KVM host machine.
- Determine the image store location. The recommended location for RedHat and Ubuntu is /var/lib/ libvirt/images. In this guide, the following path is used: /var/lib/libvirt/images/livepca.

sudo mkdir -p /var/lib/libvirt/images/livepca

**3.** Extract the two raw disk images from *LivePCA\_Virtual\_KVM\_\*.tar.gz* and archive to your desired image store location.

#### sudo tar xvzf LivePCA\_Virtual\_KVM\_\*.tar.gz -C /var/lib/libvirt/images/livepca

4. Define the LiveCapture Virtual machine using virt-install. If you used a different image store location than mentioned earlier, please update both '--disk' entries with the correct path. The first 'network' entry is for the management, so we recommend configuring 'bridge' networking. The second 'network' entry is the capture network.

```
sudo virt-install \

--import \

--name livepca \

--description "LiveCapture Virtual" \

--virt-type kvm \

--cpu host --vcpus 8 \

--ram 16384 \

--os-type linux --os-variant ubuntu18.04 \

--network bridge=br0,model=virtio \

--network network=default,model=virtio \

--disk /var/lib/libvirt/images/livepca/disk1.img,device=disk,format=raw,bus=virtio,cache=none \

--disk /var/lib/libvirt/images/livepca/disk2.img,device=disk,format=raw,bus=virtio,cache=none \

--graphics vnc --noautoconsole
```

5. Your LiveCapture Virtual image should have successfully installed and be up and running. To verify the current state of your LiveCapture Virtual machine, execute the following command:

sudo virsh list

6. To configure the LiveCapture Virtual image to boot on start, execute the following command:

#### sudo virsh autostart livepca

7. To determine the IP address of the running LiveCapture Virtual image, execute the following command:

sudo virsh domifaddr livepca

**Note** You can also log in from the VM console and run *ifconfig eth0* to look up the IP address.

- You can proceed to configuring Ethernet and NTP server settings for LiveCapture Virtual. See Configuring Ethernet settings by command script on page 30 and Configuring an NTP server on page 31.
- 9. You can begin using LiveCapture Virtual as a virtual appliance.

# Virtual Machine Manager deployment

#### To deploy an LiveCapture Virtual instance using the Virtual Machine Manager:

- 1. Download the *LivePCA\_Virtual\_KVM\_\*.tar.gz* package from LiveAction to the desired KVM host machine.
- 2. Determine the image store location. The recommended location for RedHat and Ubuntu is /var/lib/ libvirt/images. In this guide, the following path is used: /var/lib/libvirt/images/livepca.

sudo mkdir -p /var/lib/libvirt/images/livepca

3. Extract the two raw disk images from *LivePCA\_Virtual\_KVM\_\*.tar.gz* and archive to your desired image store location.

sudo tar xvzf LivePCA\_Virtual\_KVM\_\*.tar.gz -C /var/lib/libvirt/images/livepca

4. To open Virtual Machine Manager, click Applications > System Tools > Virtual Machine Manager.

- 5. On the File menu, click New Virtual Machine to launch the New VM wizard.
- 6. Choose how to install the operating system and architecture options, and then click Forward:
  - Select Import existing disk image
  - Architecture: Select x86\_64

- 7. Provide storage and OS details, and then click Forward:
  - Provide the existing storage path: Browse to the diskl.img file extracted above (for example, /var/ lib/libvirt/images/omni-virtual/diskl.img)
  - OS type: Select Linux
  - Version: Select Ubuntu 18.04 LTS

- 8. Choose Memory and CPU settings, and then click Forward:
  - Memory (RAM): Select 16384 MiB
  - CPUs: Select 8

New VM 😣
Create a new virtual machine Step 3 of 4
Choose Memory and CPU settings:
Memory: 16384 - +
Un to 21060 MiB available on the host
Up to 8 available
Cancel Back Forward

- 9. Assign a name to the VM, select the network selection, and then click Finish:
  - Name: Type a name for the virtual machine
  - Customize configuration before install: Select this check box.

**Important!** Make sure to select the *Customize configuration before install* check box.

• *Network selection*: Select *Bridge network* so that the management port can have its own assigned IP address.

#### 10. From the side menu, select Overview:

🛩 Begin Installation 🥝 Cancel Installation

Virtual Machine Manager configures and automatically boots the LiveCapture Virtual machine.

23. Log in from the console using the default credentials (admin/admin).

**24.** Use the following command to determine the management port's IP address:

### ifconfig eth0

- 25. You can proceed to configuring Ethernet and NTP server settings for the LiveCapture Virtual machine. See *Configuring Ethernet settings by command script* on page 30 and *Configuring an NTP server* on page 31.
- **26.** You can begin using LiveCapture Virtual as a virtual appliance.

# **Deploying LiveCapture Virtual on Hyper-V**

# Requirements

- A computer running Windows Server<sup>®</sup> 2012 R2 or later with the Hyper-V role installed.
- A user account that is a member of the local Hyper-V Administrators group, or the Administrators group.

# LiveCapture Virtual Deployment

If you have not already done so, extract the contents of the LiveCapture Virtual zip to your Hyper-V server.

- 1. Open Hyper-V Manager.
- 2. From the Actions menu in Hyper-V Manager, click Import Virtual Machine.
- 3. If the Before You Begin screen appears, click Next.
- 4. Browse to the folder that contains the extracted LiveCapture Virtual files, and click Next.
- 5. Select the LiveCapture Virtual machine to import, and click Next.
- 6. Choose Copy the virtual machine as the import type, and click Next.
- 7. On *Choose Folders for Virtual Machines Files*, specify new or existing folders to store the VM files and click **Next**.
- 8. On *Choose Folders to Store Virtual Hard Disks*, specify the folder to store the virtual hard disk files and click **Next**.
- 9. After verifying your choices in the Summary page, click Finish.
- 10. Wait several minutes for the import to complete.
- 1. In Hyper-V Manager, right-click the LiveCapture Virtual machine and select Settings...

12. Select the first Network Adapter in the Hardware tree.

- 18. In Hyper-V Manager, right-click the LiveCapture Virtual machine and select Connect...
- 19. In the Virtual Machine Connection window, select Action > Start.

# LiveCapture Virtual Disk Configuration

By default LiveCapture Virtual is configured with a single OS disk (Hard disk 1), and a single capture storage disk (Hard disk 2). Both of these hard disks can be extended to increase the amount of log storage and capture storage. Capture storage can also be increased by adding additional hard disk devices to LiveCapture Virtual.

**Note** LiveCapture VIrtual image must be shutdown to expand the existing disk

## **Expanding OS storage:**

- 1. In Hyper-V Manager, right-click the LiveCapture Virtual machine and select Settings...
- 2. Under IDE Controller 0, select Hard Drive disk1.vhdx.
- 3. Click Edit to start the Edit Virtual Hard Disk Wizard.
- 4. On the Locate Virtual Hard Disk page, click Next.
- 5. Select Expand to expand the capacity of the OS disk, click Next.

- 6. On the *Expand Virtual Disk* page, enter the new virtual hard disk size. The size is specified in gigabytes with a maximum size of 64TB for any virtual hard disk.
- 7. Click Next.
- 8. On the Completing the Edit Virtual Hard Disk Wizard page, click Finish.
- 9. Click OK.
- 10. In Hyper-V Manager, right-click the LiveCapture Virtual machine and select Connect...
- **11.** In the Virtual Machine Connection window, select *Action > Start*. On reboot, LiveCapture Virtual automatically resizes the OS partition to the new size.

### Expanding capture storage disk(s):

- 1. In Hyper-V Manager, right-click the LiveCapture Virtual machine and select Settings...
- 2. Under IDE Controller 0, select Hard Drive disk2.vhdx.
- 3. Click Edit to start the Edit Virtual Hard Disk Wizard.
- 4. On the Locate Virtual Hard Disk page, click Next.
- 5. Select Expand to expand the capacity of the capture storage disk, click Next.
- 6. On the *Expand Virtual Disk* page, enter the new virtual hard disk size. The size is specified in gigabytes with a maximum size of 64TB for any virtual hard disk.
- 7. Click Next
- 8. On the Completing the Edit Virtual Hard Disk Wizard page, click Finish.
- 9. Click OK.
- 10. In Hyper-V Manager, right-click the LiveCapture Virtual machine and select Connect...
- 11. In the Virtual Machine Connection window, select Action > Start. On reboot, LiveCapture Virtual automatically resizes the capture partition to the new size.

### Adding capture storage disk(s):

- 1. In Hyper-V Manager, right-click the LiveCapture Virtual machine and select Settings...
- 2. Click SCSI Controller. On the right pane, under SCSI Controller, click Hard Drive.
- 3. Click Add.
- 4. On the right pane, under *Hard Drive*, click New.
- 5. On the Before You Begin page, click Next.
- 6. On the Choose Disk Format page, choose VHDX and click Next.
- 7. On the *Specify Name and Location* page, type the name of the new virtual hard disk. If required, type the location of the virtual hard disk. Click **Next**.
- 8. On the Configure Disk page, type disk size and click Next.
- 9. On the Completing the New Virtual Hard Disk Wizard page, click Finish.
- 10. Click OK.
- 1. In Hyper-V Manager, right-click the LiveCapture Virtual machine and select Connect...
- 12. In the Virtual Machine Connection window, select Action > Start. On reboot, LiveCapture Virtual automatically resizes the capture partition to the new size.

# **Monitoring Traffic**

The following provide a 'Best Practices' for monitoring traffic in a Hyper-V environment with LiveCapture Virtual.

# **Monitoring VM Traffic**

The following instructions will allow you to monitor network traffic of VMs on the same host by selecting Port Mirroring mode in Hyper-V.

**Note** LiveCapture Virtual can only monitor virtual machines running on the same virtual switch.

- 1. Open Hyper-V Manager.
- 2. In Hyper-V Manager, right-click the source virtual machine and select Settings...
- 3. Expand the Network Adapter in the Hardware tree.
- 4. Select Advanced Features.
- 5. In the Port mirroring section, select Source as the mirroring mode, click OK

6. Repeat these steps for all VM's you wish to monitor with LiveCapture Virtual.

# LiveCapture Virtual Activation

Once LiveCapture Virtual is installed, when you attempt to connect to it for the very first time, you must activate the product before it can be used. You can activate LiveCapture Virtual either from logging directly into a web-based version of Omnipeek, or from the **Capture Engines Window** in Omnipeek.

Both an automatic and a manual method are available for activation. The automatic method is quick and useful if you have Internet access from the computer from where you are performing the activation. If Internet access is not available, the manual method is available; however, you will need to go to a computer that does have Internet access in order to download a License file that is required to complete the manual activation.

You will need to enter the following information to successfully activate LiveCapture Virtual, so please have this information readily available:

- IP address of LiveCapture Virtual
- Product key
- User name
- Company name
- Email address
- Version number

# **Activation via Omnipeek Web**

**Note** Activation via Omnipeek is not supported on an Internet Explorer web browser. Please use any web browser other than Internet Explorer to activate LiveCapture Virtual via Omnipeek.

#### To activate LiveCapture Virtual via Omnipeek:

1. From your web browser, type the IP address of LiveCapture Virtual into the URL field of the browser and press **Enter**. The Omnipeek login screen appears.

Omnipeek <sup>®</sup>

**11.** Browse to the license file that was downloaded above and click **Next**. LiveCapture Virtual is now activated and you can begin using the product. The activation process is complete.

# Starting / shutting down LiveCapture Virtual

#### To start LiveCapture Virtual:

• Click **Power On** from the VMware or KVM console.

#### To shutdown LiveCapture Virtual:

• SSH, or use a console connection to LiveCapture Virtual and use the 'shutdown' command from the command prompt (*admin@livecapture*):

shutdown -h now

# **Contacting LiveAction support**

Please contact LiveAction support at *https://www.liveaction.com/contact-us* if you have any questions about the installation and use of LiveCapture Virtual.

# **Configuring LiveCapture Virtual**

# In this chapter:

Logging-in to LiveCapture Virtual command line	37
Using the LiveAdmin utility	37
Using DMS to manage and configure LiveAction appliances	49
Configuring network settings by command script	78
Using LiveCapture Virtual with Omnipeek	79

# Logging-in to LiveCapture Virtual command line

You can log into the LiveCapture Virtual command line by doing the following:

• Remotely, using remote SSH software such as *Putty* 

The first time you log into LiveCapture Virtual, use the following as your username and password:

username: **admin** 

password: admin

After you have logged into LiveCapture Virtual for the first time, you can then change your password and add users and privileges.

**Note** For security reasons, we strongly recommend changing the default password.

# Using the LiveAdmin utility

The LiveAdmin utility on LiveCapture Virtual lets you view and configure a variety of settings from the LiveAdmin views in the left-hand navigation pane of the utility. To learn more about each of the LiveAdmin views, go to the appropriate section below:

LiveAdmin				20	21-09-28 08:18	:09 GMT -11:00	🔒 Administrator 🔫
dashboard	Dashboard

	Netmask	255.255.255.0					
	Gateway	10.8.1.1					
	DNS Servers	10.4.58.21 8.8.8.8					

- Dashboard: The Dashboard view provides you with some very basic information about the system. See Dashboard on page 39.
- Authentication: The Authentication view lets you change the password for LiveCapture Virtual. See Authentication on page 40.
- Monitor. The Monitor view displays the health of the overall system. See Monitor on page 41.
- *Network*: The *Network* view lets you configure the primary network interfaces network settings and the hostname of the system. See *Network* on page 41.
- *Omni*: The *Omni* view lets you enable the Device Management Server (DMS) for the appliance. See *Omni* on page 43.
- *Support*: The *Support* view let you download logs from the system that would be helpful in troubleshooting issues. See *Support* on page 45.
- *Time*: The *Time* view lets you configure the system's Timezone and NTP servers. See *Time* on page 46.

- *TLS*: The *TLS* view lets you change the self-signed certificates that LiveAdmin and Omnipeek use for HTTPS. See *TLS* on page 47.
- *Update*: The *Update* view lets you update the appliance using a software update package. See *Update* on page 48.
- Administrator. The Administrator context menu in the upper right lets you restart LiveCapture Virtual, power off LiveCapture Virtual or log out from the LiveAdmin utility. See *Restart and power off* on page 49.
- **Important!** LiveCapture Virtual comes pre-configured to obtain its IP address via DHCP. The IP address is required to configure LiveCapture Virtual, as described below. You can obtain the IP address by logging into the DMS as described in *Using DMS to manage and configure LiveAction appliances* on page 49.
  - **Note** If an IP address is not assigned to LiveCapture Virtual by the DHCP server within two minutes of being connected to the network, LiveCapture Virtual defaults to a static address of 192.168.1.21.

# Login

#### To log into the LiveAdmin utility:

 From a browser window on a computer connected to the same network as LiveCapture Virtual, enter the IP address for LiveCapture Virtual in the URL box as <IP address>:8443 (e.g., 192.168.1.21:8443). The LiveAdmin Login screen appears.

- 2. Enter the default password 'admin' and click Login.
  - **Note** If you are using Omnipeek Web, you can also access the LiveAdmin Login screen by clicking *System Configuration* from either the Omnipeek Login screen, or by clicking *Configure System* from within Omnipeek itself.

		Update			

- Current Password: Enter the current password for LiveCapture Virtual. The default is admin.
- *New Password*: Enter the new password for LiveCapture Virtual. The new password must meet the following requirements:
  - Must have 5 different characters than the last password.
  - Must be at least 6 characters.
  - Must contain at least 1 number

- Must contain at least 1 uppercase character.
- Must contain at least I lowercase character.
- Must contain at least I special character.
- Confirm Password: Enter the new password to confirm the password.
- *Update*: Click to change the password.

Note Make sure to note the Password that you configure.

# Monitor

The Monitor view displays the health of the overall system. The view is broken up into four usage charts and one interface statistics table.

- *CPU Usage*: This chart displays the current usage of individual CPUs on the system. Click the CPU label in the legend to enable/disable its data displayed in the chart.
- *Memory Usage*: This chart displays the current amount of memory being consumed on the system. Click the *Total, Used*, or *Free* labels in the legend to enable/disable which data to display in the chart.
- *Network Usage*: This chart displays the current throughput of the network interfaces. Click the labels in the legend to enable/disable which data to display in the chart.
- *Disk Usage*: This chart displays the current amount of space being used by the Data and Metadata volumes. Click the *Total, Used*, or *Free* labels in the legend to enable/disable which data to display in the chart.
- *Interface Statistics*: This table displays the statistics of the primary management interface. To update the statistics click **Refresh**.

# Network

The *Network* view lets you configure the primary network interface network settings and the hostname of the system. You can configure either DHCP or static network settings.

**Note** Changing the network settings will restart the omni service.

Liv	veAdmin			2021-09-28 09:27:20 GMT -11:00	🐣 Administrator 👻
*	DASHBOARD	Network

<b>a</b>	TLS	Netmask*			
<b>6</b>	UPDATE				
		Gateway*			
		DNS			
		Add DNS server	+		
		Submit			

- *Hostname*: Enter a name for LiveCapture Virtual. A unique device name allows for easy identification of data sources. The hostname can only contain alphanumeric characters and hyphens, and cannot be longer than 255 characters.
- Network Mode: This setting lets you to specify whether LiveCapture Virtual uses a DHCP or static setting for its IP address. If Static is selected, then IP Address, Netmask, Gateway, and DNS settings can be configured for LiveCapture Virtual. If DHCP is selected, then LiveCapture Virtual is configured by a DHCP server.
- Important! If DHCP is selected as the *IP Assignment*, and if the address should change on a new DHCP lease, then the user must look up the new IP address assigned to LiveCapture Virtual. To help you look up the IP address, the MAC Address of LiveCapture Virtual is displayed as the *Ethernet Address*.
  - *IP Address*: This setting lets you specify the IP address that you are assigning to LiveCapture Virtual.
  - *Netmask*: A Netmask, combined with the IP address, defines the network associated with LiveCapture Virtual.
  - *Gateway*: Also known as 'Default Gateway.' When LiveCapture Virtual does not have an IP route for the destination, the IP packet is sent to this address as it does not know how to direct it locally. Only a single default gateway can be defined.
  - *DNS*: This is the domain name server. A Domain Name Server translates domain names (e.g., www.liveaction.com) into an IP address. To add a DNS server, enter the address of the server, and click the plus (+) icon. Multiple DNS name servers can be defined. You can also edit or delete any defined DNS servers.

#### **Configure DHCP**

#### To configure a DHCP IP address:

1. Enter a hostname in the *Hostname* field.

- 2. From the Network Mode list, select DHCP.
- 3. Click Submit.

### **Configure Static**

#### To configure a static IP address:

- 1. Enter a hostname in the Hostname field.
- 2. From the Network Mode list, select Static.
- 3. Enter a valid IP address in the IP Address field.
- 4. Enter a valid netmask in the *Netmask* field.
- 5. Enter a valid default gateway in the *Gateway* field.
- 6. (Optional) Enter a valid DNS server in the Add DNS server field and click the plus (+) button.
- 7. Click Submit.

**Note** You will lose connection to LiveCapture Virtual if you configured a new static address in *IP Address* above.

# Omni

The *Omni* view lets you enable the Device Management Server (DMS) for the appliance, Backup, and Restore options.

٩	SUPPORT	Offline Package		
		Choose File No file chosen		
		tupload ⊘ Cancel		
≏	UPDATE			

**Note** Updating the software will cause the system to reboot.

#### To update the software:

- 1. Download the latest software update package to your system.
- 2. Click Choose File and select the software update package.
- 3. Click Upload to upload the package and begin the update process.

Once the update process is complete, the system restarts. A restart message is broadcast to all users connected to the appliance.

# **Restart and power off**

The *Administrator* context menu at the top of the LiveAdmin utility has options that let you restart and power off LiveCapture Virtual and log out from the utility.

#### To restart LiveCapture Virtual:

- 1. Click the Administrator context menu and select Restart.
- 2. Click Yes, restart now! to confirm the restart.

#### To power off LiveCapture Virtual:

- 1. Click the Administrator context menu and select Power off.
- 2. Click Power Off to confirm you want to power off.

#### To log out of the LiveAdmin utility:

• Click the Administrator context menu and select Log out.

# Using DMS to manage and configure LiveAction appliances

If you have one or more LiveAction appliances, you can use the Device Management Server (DMS) to manage and configure these appliances from the cloud. In order to use the DMS server for the LiveAction appliance, you must first enable the *Enable DMS* option in the LiveAdmin utility as described in *Omni* on page 43.

- **Note** When DMS is enabled, you can make local changes to the LiveAction appliance using the LiveAdmin utility; however, changes made with the DMS will overwrite any local changes made with the utility.
- **Note** All DMS communications require that the LiveAction appliance has Internet access and is able to access various websites including *https://mypeek.liveaction.com* and *https://cloudkeys.liveaction.com* using TCP over port 443. If necessary, configure a DNS server to resolve the URLs above.

Additionally, all DMS communications are initiated by the LiveAction appliance, so it is not necessary to open a port in the firewall for communications.

#### To use DMS to manage and configure LiveAction appliances:

1. Log into the LiveAction Customer Portal at https://cloudkeys.liveaction.com/.

**Note** A link to the LiveAction Customer Portal and a temporary password is emailed to the customer whenever a LiveAction appliance is purchased. Use the customer email and temporary password to log into the customer portal. You will be required to change the temporary password upon first login.

LiveAct	ion∗
	er Portal
Login	

2. Click the **LIVEWIRE/LIVECAPTURE** tab at the top of the portal to configure the appliances. The LiveAction appliances associated with the user account are displayed.

# **DMS Devices tab**

The DMS Devices tab displays the LiveCapture Virtual devices associated with user's account. A description of each of the available options and settings in the *Devices* tab is provided below:

			Devices							plates

## **Device State**

The Device State displays whether the device is able to connect to the DMS portal.

- Up: Displays the number of devices that were able to connect the DMS portal.
- *Down*: Displays the number of devices the DMS portal has not heard from in the last two intervals. The default interval is 10 minutes.
- *N/A*: Displays the number of devices that are not available to the DMS portal.

#### **Registered Devices**

The *Registered Devices* displays the number of devices that have registered with the DMS portal.

- *Present*: Displays the number of devices that have registered with the DMS portal.
- None: Displays the number of devices that have not registered with the DMS portal.

#### **Activation Status**

The Activation Status displays the number of devices that have been activated.

- *Present*. Displays the number of devices that have been activated with the DMS portal.
- *None*: Displays the number of devices that have not been activated with the DMS portal.

#### Template

Click the **Template** button to select a template to apply to the selected devices. Templates allow you to apply version-specific settings to one or more devices. To create a template or modify an existing template, see *DMS Templates tab* on page 66.

#### Configure

Click the *Configure* button to configure the selected devices. If multiple devices are selected, certain configuration options will not be available and greyed out; for example, the *Device Name*. There are tabs available for configuring *Settings*, *Time Settings*, and *Authentication*.

#### Settings

Settings	Device Name *	Host Name *
Time Settings	Capture Engine	liveaction
Authentication	"Note: A unique device name allows for easy identification of data IP Assignment *	a sources
SNMP Credentials	Static	~
	Address *	Netmask *
	10.8.100.141	255.255.255.0
	"Note: If the default IP address is changed, you must reconnect to the a Gateway * using the new address after the change i	appliance is applied
	10.8.100.1	
	DNS	
	Server Address	Add Server
	DNS Servers	
	8.8.8.8	1
	10.4.58.21	1

- Device Name: Displays the unique name given to the device. Type a new name to change the name.
- *Host Name*: Displays the host name of the device used by DNS. Type a new name to change the name.
- *IP Assignment*: Displays the current IP assignment for the device. You can select either *DHCP* or *Static*. If the IP Assignment is *DHCP*, then the IP assignment is configured automatically via the DHCP server. If the IP Assignment is *Static*, then the options below are available:
- **Important!** LiveCapture Virtual is pre-configured to obtain an IP address automatically from a DHCP server; however, we strongly recommend the use of a static IP address for LiveCapture Virtual. If DHCP is selected as the *IP Assignment*, and if the address should change on a new DHCP lease, then the user must look up the new IP address assigned to LiveCapture Virtual.

Note If *DHCP* is selected, you have approximately two minutes to connect LiveCapture Virtual to your network in order for the DHCP server to assign an IP address. If an IP address is not assigned to LiveCapture Virtual by the DHCP server within two minutes of being connected to the network, LiveCapture Virtual defaults to a static address of 192.168.1.21. Please make sure LiveCapture Virtual is connected to your network within the two minute time period from the time you click **Apply**. If you reboot LiveCapture Virtual, the two minute clock is also reset.

- Address: Displays the IP address assigned to the device. Type a new address to change the IP address.
- *Netmask*: Displays the netmask address assigned to the device. A netmask address, combined with the IP address, defines the network associated with device. Type a new address to change the netmask address.
- *Gateway*: Displays the gateway address, also known as 'default gateway,' assigned to the device. When the device does not have an IP route for the destination, the IP packet is sent to this address as it does not know how to direct it locally. Only a single default gateway can be defined. Type a new address to change the gateway address.

- *DNS*: Enter the address of any DNS (Domain Name Server) servers to add to the configuration. A Domain Name Server translates domain names (e.g., www.liveaction.com) into an IP address. To add a DNS server, enter the address of the server, and click **Add Server**. Multiple DNS name servers can be defined. You can also edit or delete any defined DNS servers.
- Add Server. Click to add the DNS server to the configuration.
- DNS Servers: Displays the DNS servers added to the configuration.
- Edit DNS: Click to edit or update the DNS server in the configuration.
- Delete DNS: Click to delete the DNS server from the configuration.
- DHCP Timeout: Displays the amount of time (in seconds) the device will wait for a DHCP address.

#### **Time Settings**

Time Zone *	
America/Los Angeles (UTC-08:00)	
NTP Server	
NTP Server	Add Server
NTP Servers	
0.ubuntu.pool.ntp.org	/
	NTP Server NTP Server NTP Servers

- *Time Zone*: Displays the time zone of the device. Select a different time zone to change the time zone.
- *NTP Server*: Enter the address of any NTP servers to add to the configuration, and then click **Add Server**.
- *NTP Servers*: Displays the list of NTP servers added to *Time Settings*. You can click the **Edit** icon to edit an NTP server in the list, or click the **Trash** icon to remove an NTP server from the list.

#### Authentication

Settings	Enable OS authentication only	
ime Settings	<ul> <li>Enable third-party authentication</li> </ul>	
uthentication		
NMP Credentials		

- Enable OS authentication only. Select this option to use the local OS authentication.
- *Enable third-party authentication*: Select this option to use TACACS+ or RADIUS authentication. If this option is selected, click **Add** to configure the new authentication setting.
  - *Add*: Click to add a new authentication setting. You will need to configure the new authentication setting.
  - Search: Enter the text string to search the list of authentication settings.
  - Name: Displays the name of the authentication setting.
  - Type: Displays the type of authentication, which can be either 'RADIUS' or 'TACACS+.'
  - Host: Displays the host of the authentication setting.
  - Port. Displays the port of the authentication setting.
  - Secret. Displays the secret key of the authentication setting.
  - In Use: Displays whether or not the authentication setting is in use.
  - *Action*: Click the *Edit* icon to edit the authentication setting, or click the *Trash* icon to delete the authentication setting.
  - *Apply*. Click to save the authentication setting.

#### **SNMP Credentials**

Settings	SNMP CREDENTIALS Disabled			
Time Settings	Authentication Password *	Privacy Passwor	rd *	
Authentication		Privacy Passw		۲
SNMP Credentials				

- Enabled/Disabled: Select to enable or disable the SNMP Credentials configured below for the Authentication Password and Privacy Password.
- Authentication Password: Type a new Authentication Password to change it from the default Authentication Password displayed in 'LiveNX SNMP Configuration' in LiveFlow on page 87.
- *Privacy Password*: Type a new *Privacy Password* to change it from the default Authentication Password displayed in 'LiveNX SNMP Configuration' in *LiveFlow* on page 87.

#### Upgrade

Click the **Upgrade** button to upgrade the selected appliance remotely through the DMS. The version that the appliance is upgraded to is the latest shipping version of the appliance. There is no capability to upgrade to a previously released version.

- Disable: Select to disable the upgrade on the selected devices.
- *Enable*: Select to enable the upgrade on the selected devices. If you enable the upgrade, you are presented with settings to specify the date and time the upgrade should take place. Because all communications are initiated from the device once every ten minutes, the upgrade will happen as the result of the device communicating with the network, sometime on or after the selected time.

• Apply. Click to save the changes to the selected devices.

### Refresh

Click the **Refresh** button to refresh the list of devices.

# Elipsis (...)

Click the **Elipsis** (...) to view the following options:

- Power and Reset
- Change Password
- Edit Additional Info
- Backup Settings
- Restore Backup
- Share
- Create Template
- Compare Configurations
- iDRAC Settings

#### **Power and Reset**

Select the Power and Reset option to perform the actions below on the device.

ACTIONS SV201704500001	×
Actions	
Note: Once LiveWire is powered off, you need to manually press the button to power it back.	
None Power Off Reboot Factory Reset     Clear Activation Id	
Cancel Appl	y

- None: Select to not perform an action on the selected appliances.
- *Power Off*: Select to power off the selected device. Once the device is powered off, you must manually press the power-on button on each of the devices to power them back on.
- *Reboot*. Select to reboot the selected appliances.
- Factory Reset. Select to reset the selected appliances to their factory default settings.
- Clear Activation ID: Select the check box to clear the activation ID.

#### **Change Password**

Select the Change Password option to change the password of the selected devices.

CHANGE PASSWORD		×
Current Password		
Current Password		
New Password		
New Password		
Confirm Password		
Confirm Password		
	Reset	Submit

- Current Password: Enter the current password.
- *New Password*: Enter the new password. The new password must meet the following requirements:

Must have 5 different characters than the last password. Must be at least 6 characters. Must contain at least 1 number Must contain at least 1 uppercase character. Must contain at least 1 lowercase character. Must contain at least 1 special character.

• Confirm Password: Enter the new password again.

#### **Edit Additional Info**

Select *Edit Additional Info* to edit various settings of the selected devices.

#### SFTP

- Configure SFTP. Click to configure the SFTP (Secure FTP) server for the backup.
  - Hostname: Type the IP address of the SFTP server.
  - *Port*: Type the port used for the SFTP Server.
  - Username: Type a username.
  - *Password*: Type a password for the SFTP server.
  - *Directory*. Type the directory where backups are saved on the SFTP server.
- Delete: Click to delete the configured SFTP server for the backup.

#### Schedule

- Enable Schedule: Click to enable scheduling for the backup.
- *Backup Filename prefix*: Type a prefix filename for the backup. Each scheduled backup that is created will append the prefix to the beginning of the backup filename.
- Date and Time: Click to configure the date and time the backup will complete.
- Backup Interval: Type the number of days between YADA.
- *Retention Limit*. Type the number backups to YADA.

#### Encryption

- *Encryption*: Displays whether or not encryption is configured for each scheduled backup.
- **Configure Security**. Click to configure security settings to encrypt each scheduled backup.
  - *Encrypt backups*: Select this option to encrypt each scheduled backup.
  - *Password*: Type the password to YADA. The password must be YADA
  - *Repeat Password*: Tye the password again to verify the password.

#### **Restore Backup**

Select *Restore Backup* to restore a backup from an earlier backup. See *Backup and restore* on page 75 for instructions on performing an actual restore.

cation

- Action: Click **Restore** to restore a backup for the device. You will need to select to restore either Application Settings or Application and System Settings.
  - *Application Settings*: Select this option to restore all application settings and customizations, including capture templates, filters, graphs, alarms, notifications, name table, SSL certificates, and custom plugins.
  - Application and System Settings: Select this option to restore all application settings and customizations, including capture templates, filters, graphs, alarms, notifications, name table, SSL certificates, and custom plugins. Additionally, all system settings are restored and include all new and/or updated users, SNMP, NTP, network, time zone, and host customizations.
  - Password: Type the password of the backup you are restoring.
  - *Restore*: Click to perform the restore.
- *Status*: Displays the status of the backup.
- Backup TIme: Displays the date and time the backup was completed
- *File Name*: Displays the name of the backup.
- *Location*: Displays the location of the backup.

#### Share

Select the *Share* option to share the selected devices with other users who manage and configure appliances. You will need to add a user by completing the *Manage Users* dialog.

MANAGE USERS SV201701001384		×

- *First Name*: Type the first name of the user.
- Last Name: Type the last name of the user.
- *Email*: Type the email address of the user.
- Reset. Click to clear the Add User values.
- Add: Click to add the user to the list of secondary users.
- *Primary User*. Displays the primary user of the device when the device was registered with LiveAction. If multiple appliances are selected in the list of devices, the *Primary User* is not displayed.
- Secondary User(s): Displays any secondary users assigned to the device. If multiple appliances are selected in the list of devices, the Secondary User(s) are not displayed.

#### **Create Template**

Select the *Create Template* option to create a template based on the configuration of the selected device. Once created, the template can be selected when you click the **Template** button. See also *Template* on page 51 and *DMS Templates tab* on page 66.

#### **Compare Configurations**

Select the *Compare Configurations* option to compare details between two selected devices. This option is available only when two devices are selected.

#### **iDRAC Settings**

Select the *iDRAC Settings* option to configure various options for that would normally be configured by using the iDRAC utility on . See also *Integrated Remote Access Controller (iDRAC)* on page 66.

**Note** Only selected options available from the iDRAC utility are available and configurable below.

- Hostname: Displays the Hostname of the device. Type a new Hostname to change it.
- Domain Name: Displays the Domain Name of the device. Type a new Domain Name to change it.
- *Time Zone*: Displays the *Time Zone* of the device. Select a new *Time Zone* to change it.
- DNS Server I: Displays the DNS Server used by the device. Enter a new DNS Server to change it.
- DNS Server 2: Displays the DNS Server used by the device. Enter a new DNS Server to change it.
- *Web Server TLS Version*: Displays the TLS protocol version support used by the device. You can select from the following: TLS 1.1 and Higher, TLS 1.2 and Higher, and TLS 1.3
  - Host Header Check: Select to enable Host Header Check requests.

Network Settings:

- NIC IP Address: Displays the static NIC IP Address of the device. Type a new NIC IP Address to change it.
- NIC Gateway. Displays the NIC Gateway of the device. Type a new NIC Gateway to change it.
- *NIC Subnet Mask*: Displays the *NIC Subnet Mask* of the device. Type a new *NIC Subnet Mask* to change it.

Authentication:

- Username: Displays the Username of the device. Type a new Username to change it.
- Password: Configures the Password of the device. Type a new Password to change it.

Update Settings:

- *Enable Updates*: Select to enable updates on the device. If enabled, you must configure the Update Proxy Server, Update Proxy User, and Update Proxy Password.
- Update Proxy Server. Displays the Update Proxy Server of the device. Type a new Update Proxy Server to change it.
- Update Proxy User: Displays the Update Proxy User of the device. Type a new Update Proxy User to change it.
- Update Proxy Password: Displays the Update Proxy Password of the device. Type a new Update Proxy Password to change it.

SNMP:

- Enable SNMP. Select to enable the SNMP Agent on the iDRAC. If enabled, you must configure the SNMP Community.
  - SNMP Community: Configures the SNMP Community name used for SNMP Agents. Type a new SNMP Community name to change it
- Enable SNMP Alert 1: Select to enable the SNMP Alert 1 on the iDRAC. If enabled, you must configure the Alert 1 Target Address.
  - Alert 1 Target Address: Displays the IPv4, IPv6, FQDN address, or hostname of the target destination to receive alerts. Must be valid IPv4, IPv6, FQDN address, or hostname.
- Enable SNMP Alert 2: Select to enable the SNMP Alert 2 on the iDRAC. If enabled, you must configure the Alert 2. If enabled, you must configure the Alert 2 Target Address.
  - *Alert 2 Target Address*: Displays the IPv4, IPv6, FQDN address, or hostname of the target destination to receive alerts. Must be valid IPv4, IPv6, FQDN address, or hostname.

NTP:

• Enable NTP. Select to enable an NTP server on the iDRAC. If enabled, you must configure the NTP Server.

• *NTP Server*: Displays the name or IP address of the *NTP Server*. Type a new name or IP address to change it.

Event Filters:

- Alert. Displays any iDRAC Event filters configured for the device.
- *Add*: Click to add a new Event filter configured in the text box. You must provide any parameters by defining what you want to be alerted to and how you want to be notified. You can configure as may event filter commands as you want. The general format of an alert category:

idrac.alert.category.[subcategory].[severity]

#### Search

Use the *Search* field to locate a specific device in the list of devices. Simply enter a text string to display all appliances that match the text string.

## **Devices column headings**

Descriptions of the columns displayed in the list of devices are provided below.

**Tip** Below each of the column headings is either a text box or list box that you can use to filter the devices displayed in the list of Devices. To filter using the text box, simply enter a text string to display the devices that match the text string. To filter using a list box, click the box and select an option to display the devices that match that option.

- Device Serial: Displays the serial number of the device.
- *Device Name*: Displays the name of the device.
- *Host Name*: Displays the host name of the device used by DNS.

- *Device State*: Displays whether the device is *Up* or *Down*. A device is up if it has contacted the DMS in the last 25 minutes.
- *IP Address*: Displays the IP address of the device. The *IP Address* value is a link which can be used to connect directly to Omnipeek running on the device. This makes it easy to use the DMS as a launch pad to access all of the devices being managed. It can also be used to discover the *IP Address* in the case where the device is set to DHCP, or for some other reason the *IP Address* is not known. The *IP Address* is provided by the device every time the device connects back to the portal, which by default is every 10 minutes. This way, if the *IP Address* of the device changes, the *IP Address* value displayed in the DMS portal will reflect that.
- Model: Displays the model of the device (Edge, 1100, 3100, or Virtual).
- *Location*: Displays the location of the device.
- *Address*: Displays the address of the device. Typically, this is the mailing address where the device is located.
- Asset Tag: Displays the asset tag of the device.
- *Time Zone*: Displays the time zone of the device.
- *Expiration Date*: Displays the date that the maintenance on the device will expire. Once the expiration date has passed, you can still access the DMS and use it to manage most of the device configuration; however, until the maintenance is renewed, the device cannot be upgraded to a newer version. As LiveAction releases new versions a few times a year with significant improvements, we recommend keeping the devices up to date with the latest releases of the software.
- End Of Life Date: Displays the date for when the device should be replaced.
- *Notes*: Displays any notes entered for the device.
- Version: Displays the version number of the software installed on the device.
- Engine Type: Displays the type of device, which can be LiveWire, LiveCapture, or LiveWire Virtual.
- Shared Users Count. Displays the number of secondary users that have access to the device.
- Scheduled Action(s): Displays any 'Actions' scheduled for the device.
- Configuration Status: Displays any status associated with configuration of the device.
- *Registered*: Displays a check mark if the device has been registered with LiveAction.
- Activation Status: Displays a check mark if the license on the device is valid and not expired.

# **DMS Templates tab**

The DMS *Templates* tab displays the templates associated with your account. Templates allow you to configure settings independent of a particular device, and then apply the template, and thus the settings, to a device, or multiple devices in bulk at the same time. A description of each of the available options and settings in the *Templates* tab is provided below:

			Deriver				Townshipson		•1
			Devices				Templates

SFTP

**Backup Settings** 

- Configure SFTP: Click to configure the SFTP (Secure FTP) server for the backup.
  - *Hostname*: Type the IP address of the SFTP server.

- *Port*. Type the port used for the SFTP Server.
- Username: Type a username.
- Password: Type the password again to verify the password.
- *Directory*. Type the directory where backups are saved on the SFTP server.
- Delete: Click to delete the configured SFTP server for the backup.

Schedule

- Enable Schedule: Click to enable scheduling for the backup.
- *Backup Filename prefix*: Type a prefix filename for the backup. Each scheduled backup that is created will append the prefix to the beginning of the backup filename.
- Date and Time: Click to configure the date and time the backup will complete.
- Backup Interval: Type the number of days between YADA.
- *Retention Limit*. Type the number backups to YADA.

Encryption

- *Encryption*: Displays whether or not encryption is configured for each scheduled backup.
- *Configure Security*: Click to configure security settings to encrypt each scheduled backup.
  - *Encrypt backups*: Select this option to encrypt each scheduled backup.
  - Password: Type the password to YADA.
  - *Repeat Password*: Tye the password again to verify the password.

### **SNMP Credentials**

Settings	SNMP CREDENTIALS Disabled

**Note** Only selected options available from the iDRAC utility are available and configurable below. See also *Integrated Remote Access Controller (iDRAC)* on page 66.

- Hostname: Displays the Hostname of the device. Type a new Hostname to change it.
- Domain Name: Displays the Domain Name of the device. Type a new Domain Name to change it.
- Time Zone: Displays the Time Zone of the device. Select a new Time Zone to change it.
- DNS Server I: Displays the DNS Server used by the device. Enter a new DNS Server to change it.
- DNS Server 2: Displays the DNS Server used by the device. Enter a new DNS Server to change it.
- *Web Server TLS Version*: Displays the TLS protocol version support used by the device. You can select from the following: TLS 1.1 and Higher, TLS 1.2 and Higher, and TLS 1.3
  - Host Header Check: Select to enable Host Header Check requests.

Network Settings:

- NIC IP Address: Displays the static NIC IP Address of the device. Type a new NIC IP Address to change it.
- NIC Gateway. Displays the NIC Gateway of the device. Type a new NIC Gateway to change it.
- *NIC Subnet Mask*: Displays the *NIC Subnet Mask* of the device. Type a new *NIC Subnet Mask* to change it.

Authentication:

- Username: Displays the Username of the device. Type a new Username to change it.
- *Password*: Configures the *Password* of the device. Type a new *Password* to change it. Update Settings:

- *Enable Updates*: Select to enable updates on the device. If enabled, you must configure the Update Proxy Server, Update Proxy User, and Update Proxy Password.
- Update Proxy Server. Displays the Update Proxy Server of the device. Type a new Update Proxy Server to change it.
- Update Proxy User. Displays the Update Proxy User of the device. Type a new Update Proxy User to change it.
- Update Proxy Password: Displays the Update Proxy Password of the device. Type a new Update Proxy Password to change it.

SNMP:

- Enable SNMP: Select to enable the SNMP Agent on the iDRAC. If enabled, you must configure the SNMP Community.
  - SNMP Community: Configures the SNMP Community name used for SNMP Agents. Type a new SNMP Community name to change it
- Enable SNMP Alert 1: Select to enable the SNMP Alert 1 on the iDRAC. If enabled, you must configure the Alert 1 Target Address.
  - *Alert 1 Target Address*: Displays the IPv4, IPv6, FQDN address, or hostname of the target destination to receive alerts. Must be valid IPv4, IPv6, FQDN address, or hostname.
- Enable SNMP Alert 2: Select to enable the SNMP Alert 2 on the iDRAC. If enabled, you must configure the Alert 2. If enabled, you must configure the Alert 2 Target Address.
  - *Alert 2 Target Address*: Displays the IPv4, IPv6, FQDN address, or hostname of the target destination to receive alerts. Must be valid IPv4, IPv6, FQDN address, or hostname.

NTP:

- Enable NTP: Select to enable an NTP server on the iDRAC. If enabled, you must configure the NTP Server.
  - *NTP Server*: Displays the name or IP address of the *NTP Server*. Type a new name or IP address to change it.

Event Filters:

- Alert. Displays any iDRAC Event filters configured for the device.
- Add: Click to add a new Event filter configured in the text box. You must provide any parameters by defining what you want to be alerted to and how you want to be notified. You can configure as may event filter commands as you want. The general format of an alert category:

idrac.alert.category.[subcategory].[severity]

### Edit

Click the **Edit** button to edit the selected template. See also Add Template on page 67.

### Delete

Click the **Delete** button to delete the selected template.

### Share

Click the **Share** button to share the selected template with other users who manage and configure appliances. You will need to add a user by completing the *Manage Users* dialog.

MANAGE USERS upgrade		×

	testtemplate		22.1		America/Los Angeles (UTC-08:00)		~	dvyas@liveaction.com	

- *Template Name*: Displays the name of the template. Click the name to display details about the template.
- *Version*: Displays the version number of the template.
- *Timezone*: Displays the time zone of the template.
- *Shared*: Displays the users that have been shared with the device. Shared users can fully configure a device from DMS.
- *Owner*. Displays the owner of the device. There can only be one owner of the device.

# **Backup and restore**

The *Backup Settings* in DMS lets you configure and designate an SFTP (Secure FTP) server for backing up the application and system settings on the LiveWire device. Once a backup is created, you can use the *Restore Backup* settings to restore either the application settings, or both the application and system settings to the same or different LiveWire device.

Here are descriptions of the *Application* and *System* settings that are included in a backup:

- *Application* settings: These are all application settings and customizations, including capture templates, filters, graphs, alarms, notifications, name table, SSL certificates, and custom plugins.
- System settings: These are new and/or updated users, SNMP, NTP, network, time zone, and host customizations.

### **Creating a backup**

1. Click the **Elipsis** (...) in DMS and select *Backup Settings*. The *Backup Settings* dialog appears. See *Backup Settings* on page 58 for a description of each of the settings.

BACKUP SETTINGS	LR201412	2007447			×

### SFTP

- Configure SFTP: Click to configure the SFTP (Secure FTP) server for the backup.
  - Hostname: Type the IP address of the SFTP server.

- *Port*. Type the port used for the SFTP server.
- Username: Type a username for the SFTP server.
- *Password*: Type a password for the SFTP server.
- *Directory*. Type the directory where backups are saved on the SFTP server.
- Delete: Click to delete the configured SFTP server for the backup.

### Schedule

- Enable Schedule: Click to enable scheduling for the backup.
- **Backup Filename prefix**: Type a prefix filename for the backup. Each scheduled backup that is created will append the prefix to the beginning of the backup filename.
- Date and Time: Click to configure the date and time the backup will complete.
- Backup Interval: Type the number of days between when backups are performed.
- *Retention Limit.* Type the number backups to save before a backup is deleted.

### Encryption

- *Encryption*: Displays whether or not encryption is configured for each scheduled backup.
- *Configure Security*. Click to configure security settings to encrypt each scheduled backup.
  - *Encrypt backups*: Select this option to encrypt each scheduled backup.
  - *Password*: Type a password for the encrypted backup.
  - *Repeat Password*: Tye the password again to verify the password.
- *Apply*: Click to apply the backup settings on the device.
- 2. Click **Configure SFTP** to configure the SFTP (Secure FTP) server for the backup. The **Configure SFTP** dialog appears.

Password			
Password			۲
		Cancel	Restore

3. Select either the Application Settings or Application and System Settings option, enter the Password for the backup, and click **Restore**.

# Configuring network settings by command script

You can configure LiveCapture Virtual network settings by using the 'omni-interface' command script from the 'root' user command prompt (*root@LiveCapture*). To get to the '**root**' user command prompt, enter the following command from the command prompt and enter '**admin**' as the password when prompted:

#### #sudo su

Here are the commands to configure the network settings from the command prompt:

Usage: omni-interface [options]

options:

-a,adapter	adapter to modify
-f,wifi	enable or disable Remote AP Capture capability [on off]
-c,dhcp	configure dhcp
-s,static	configure static
-l,manual	configure manual
-r,address	static adapter address
-m,netmask	static adapter netmask
-b,broadcast	static adapter broadcast address
-w,network	static adapter network address
-g,gateway	static adapter gateway address
-h,hwaddress	static adapter mac address
-d,dns	static dns servers (comma separated)

Important! The Ethernet ports can be configured to obtain an IP address automatically from a DHCP server by specifying 'dhcp' instead of 'static' settings; however, we strongly recommend the use of static IP addresses for the Ethernet ports. If DHCP is used, and if the address should change on a new DHCP lease, then the user must restart the Capture Engine service to see the new IP addresses in the 'Adapters' capture options in Omnipeek.

Additionally, if you specify 'dhcp' instead of 'static' settings, and there is no DHCP server available, you must allow the command to time-out.

# Using LiveCapture Virtual with Omnipeek

Any computer on the network with the Omnipeek Windows software installed can now access the Capture Engine running on LiveCapture Virtual. From the **Capture Engine** window in Omnipeek, you can configure, control, and view the results of the Capture Engine remote captures.

For more information on how to view and analyze remote captures from within the Omnipeek console, please see *Using Capture Engines with Omnipeek* on page 98, and also the *Omnipeek User Guide* or Omnipeek online help.

# CHAPTER 3

# **Capture Engines**

# In this chapter:

About Capture Engine	. 81
Using the Capture Engine Manager	. 81
Configuring a Capture Engine	. 87
Updating Capture Engine settings	. 92
Updating Capture Engine ACL settings	. 93
Using Capture Engines with Omnipeek.	. 98
Third-party authentication with Capture Engines	101

# **About Capture Engine**

Pre-installed on LiveCapture Virtual, Capture Engine captures and analyzes network traffic in real time and records that traffic for post-capture analysis. With Capture Engine, network engineering teams can monitor distributed networks remotely and quickly identify and remedy performance bottlenecks without leaving the office.

Capture Engine works in conjunction with Omnipeek, a separate software program required for the monitoring and analysis of the packets captured remotely by . For more information on how to view and analyze remote captures from within the Omnipeek console, please see <u>Using Capture Engines with Omnipeek</u> on page 98, and also the <u>Omnipeek User Guide</u> or Omnipeek online help.

# **Using the Capture Engine Manager**

The Capture Engine Manager is installed by default when you install Omnipeek. You can run the Capture Engine Manager from the Omnipeek computer to do the following:

- Update and configure the Capture Engine on
- Display the status and configuration of Capture Engines
- Update settings for filters, alarms, remote graph templates, and capture templates
- Distribute security settings to all Capture Engines running within the same domain
- View the Audit log

### Navigating the Capture Engine Manager window

To start the Capture Engine Manager from the Omnipeek computer:

- Choose Start > All Programs > LiveAction > LiveAction Capture Engine Manager for Omnipeek. The Capture Engine Manager appears.
- On the Start menu, click LiveAction Capture Engine Manager for Omnipeek. The Capture Engine Manager appears.

The parts of the Capture Engine Manager window are described below.

		🚯 Capture Engine Manager - Engines.om	c	
		File Edit View Window Help

L09				

• Toolbar: The toolbar allows you to control the following program functions:

• Open: Click to open a Capture Engine Manager Workspace (\*.omc) file.

- Save: Click to save the Capture Engine Manager Workspace (\*.omc) file.
- View Workspace: Click to hide/show the Workspace pane.
- View Log Window: Click to hide/show the Log pane.
- Insert Group: Click to insert a new Capture Engine group.
- Insert: Click to insert a new Capture Engine.
- *Discover*: Click to discover Capture Engines via UDP multicast. See *Discover Capture Engines* on page 86.
- *Delete*: Click to delete the selected Capture Engine group or single Capture Engine.
- *Connect*: Click to display the **Connect** dialog, allowing you to connect to the selected Capture Engine. See *Connecting to a Capture Engine* on page 83.
- *Disconnect*: Click to disconnect the Capture Engine Manager from the Capture Engine displayed in the active window.
- Configure Engine: Click to start the Capture Engine Configuration Wizard to configure the Capture Engine. See Configuring a Capture Engine on page 87.
- *Restart Engine*: Click to restart the Capture Engine. See *Reconnect button* on page 86.
- Update Settings: Click to update the settings for Filters, Alarms, or Graphs for the Capture Engine. See Updating Capture Engine settings on page 92.
- *Update Software*: Click to update the Capture Engine software for one or more Capture Engines using the Update Service.
- Update ACL: Click to distribute a single Access Control List (ACL) to multiple Capture Engines running on machines belonging to the same Domain. See Updating Capture Engine ACL settings on page 93.
- *Help Topics:* Click to display online help for the Capture Engine Manager application.
- Workspace: This area displays the list of currently defined Capture Engines. Both Omnipeek and Capture Engine manager maintain the same list of Capture Engines. Making a change in either program automatically updates the list in the other program.

**Note** Right-click inside the Workspace to display a context-menu with additional options for displaying the list of Capture Engines; inserting and discovering Capture Engines; editing, deleting, or renaming Capture Engines; connecting and disconnecting Capture Engines; forgetting all passwords; and importing and exporting Capture Engines.

**Note** Opening a Capture Engine Manager Workspace (\*.omc) file other than the engines.omc default file (located in C:\Users\<username>\AppData\Roaming\LiveAction\Omnipeek), will no longer synchronize the list of Capture Engines displayed in Omnipeek and Capture Engine Manager.

- Capture Engine Details window: This area displays the details and tabbed views for the Capture Engine.
   Each Capture Engine window can also have an Analysis Modules and Audit Log view, in addition to Status, Filters, Alarms, and Graphs views. Double-click any Capture Engine in the Workspace to view the details for that Capture Engine.
- *Log*: This area shows the messages sent to the Log file, including program start and the status of update tasks.
  - You can right-click inside the log to save, copy, or clear the contents of the Log file.
  - Choose File > Save log to save the Log file as a text file.
    - **Tip** You can float the Workspace and Log panes, or drag either to dock it in a different location. To toggle between floating and docking, double-click the title bar of the window.

### **Creating new engine groups**

You can organize Capture Engines in groups or add single Capture Engines one at a time to the Workspace.

#### To create a new group in the Workspace:

- 1. Select the location in the Workspace under which the new group should appear.
- 2. Click Insert Group in the toolbar.

The new group appears with its default name (New Group) ready to edit.

 Capture Engine Manager - Engines.omc

 File

 View Window
 Help

 Workspace
 # X

 Image: Second Seco

### Tip To change the name of a group in a Workspace file, right-click and choose Rename.

### **Connecting to a Capture Engine**

You can connect to a Capture Engine and add it to the Workspace.

#### To add a Capture Engine to the Workspace:

- 1. Select the location in the Workspace under which the new Capture Engine should appear.
- 2. Click Insert Engine. The Insert Engine dialog appears.

Insert Engine		
Engine		
	Host:	<b>•</b>
		6367
Credentials		
	Domain:	
	Username:	
	Password:	
		Save my password
		Connect Cancel Help

- **3.** Complete the dialog:
  - Host: Enter the IP address or DNS name of the engine that you want to connect to.
  - *Port*: Enter the TCP/IP Port used for communications. The default port is 6367.
  - *Domain:* Type the Domain for the Capture Engine. If the Capture Engine is not a member of any Domain, leave this field blank.
  - Username: Type the Username for login to the Capture Engine.
  - *Password*: Type the Password for login to the Capture Engine.
  - **Note** If you leave the *Username* and *Password* fields blank, the Capture Engine Manager attempts to log in using the current Windows login credentials.
- 4. Click Connect. When the connection is established, the Capture Engine is added to the Workspace and its Capture Engine window is displayed showing details for that Capture Engine. See Capture Engine details windows on page 85.

	eth3			00:0C:29:66	:52:E6	1,000 Mb	its/s

**Note** When you close the **Capture Engine Manager** window, you are automatically disconnected from any Capture Engine displayed in the Capture Engine Manager. When you start the Capture Engine Manager again, all Capture Engines are in a disconnected state. You will need to reconnect to any Capture Engine that you want to configure or update.

### **Capture Engine details windows**

A **Capture Engine** details window displays status information about the Capture Engine and lists the filter, alarm, and graph settings that can be distributed from the Capture Engine to other Capture Engines using the Capture Engine Manager. A Capture Engine details window can have the following tabs: **Status**, **Filters**, **Alarms**, **Graphs**, **Analysis Modules**, and **Audit Log** and **Connected Users**.

Capture Engine			Modules	Audit Log	Connected	Users

eth3		00:0C:29:66:5	2:E6		1,000 Mbits/	

- The **Status** tab displays details about the connected Capture Engine. It includes the *Name, IP Address* and *Port* configured for the Capture Engine, *User*, product and file *Version* for the Capture Engine, and whether or not the *Update Service* is running.
  - *Captures*: Shows all the captures defined for the Capture Engine, including the Name, Status (Capturing or Idle), Duration, Adapter it is using, and the Owner.
  - *Adapters*: Shows all the adapters available to the Capture Engine, including the Title, Description, physical Address, and the network Speed.
    - Tip To print the Status tab of a Capture Engine window, make it the active window and choose File > Print....
- The Filters tab lists all the filters defined for the Capture Engine
- The Graphs tab lists all the remote graph templates defined for the Capture Engine
- The **Analysis Modules** tab displays summary information about each analysis module installed on the Capture Engine
- The **Audit Log** tab lists all available information regarding events taking place on the Capture Engine. You can go to the first and last page of the log, and you can search the log.

• The **Connected Users** tab lists all users currently connected to the Capture Engine. Click **Refresh** to refresh the list.

You can distribute settings from the **Filters**, **Alarms**, and **Graphs** tabs to other Capture Engines. For details, see *Updating Capture Engine settings* on page 92.

### **Discover Capture Engines**

When you click **Discover** in the toolbar, the **Discover Engines** dialog appears. This dialog lets you search for Capture Engines installed on the local segment of your network. You can then insert one or more of the Capture Engines that are found into the Workspace.

#### **To discover Capture Engines:**

1. Click Discover in the toolbar. The Discover Engines dialog appears.

Discover Engines		×
Engines:		
Name	Address	Port
💽 Discover	Listen fo	r 4 🚔 seconds
Ready		
ОК	Cancel	Help

- Engines: Displays the Capture Engines found on the local segment of your network.
- *Discover:* Click to search for Capture Engines installed on the local segment of your network. The status message will change from *Listening...* to *Finished* when all network-available Capture Engines are discovered.
- *Listen time:* Enter the number of seconds that the Capture Engine Manager will listen for responses to the discovery request. You can enter a minimum of 2 and a maximum of 60 seconds.
- 2. Click **Discover** on the dialog. All Capture Engines found on the local segment of your network are displayed in the Engines list.
- Discovered Capture Engines have the check box next to their name selected. Clear the check boxes of the Capture Engines that you do not want to add to the Workspace and click OK. Only the selected Capture Engines are added to the Workspace.
  - Tip Right-click in the *Engines* pane of the **Discover Engines** dialog and select **Uncheck all** to deselect all Capture Engines.

### **Reconnect button**

### To reconnect to a Capture Engine listed in the Workspace:

- 1. Open the Status tab of the Capture Engine window for the desired Capture Engine.
- 2. Click Reconnect.

This engine is disconnected: Reconnect	
Capture Engine	
Name: Capture Engine Address: 10.4.2.53:6367 User: root	
Captures	

When you click **Reconnect**, the Capture Engine Manager applies the most recently used login information for the selected Capture Engine.

**Note** If you wish to log in under a different *Username*, or if the configuration for the IP address and/or port have changed since your last login in the same session, you must use the **Connect** dialog directly. See *Connecting to a Capture Engine* on page 83.

# **Configuring a Capture Engine**

To configure a Capture Engine, you must use the **Capture Engine Configuration Wizard** of the Capture Engine Manager.

**Note** The **Capture Engine Configuration Wizard** of the Capture Engine Manager also appears when you first install a Capture Engine and are prompted to configure it.

#### To configure a Capture Engine from the Omnipeek computer:

- Choose Start > All Programs > LiveAction > LiveAction Capture Engine Manager for Omnipeek. The Capture Engine Manager window appears.
- 2. Connect to a Capture Engine in the Workspace (see *Connecting to a Capture Engine* on page 83) and click **Configure Engine** in the toolbar. The **Capture Engine Configuration Wizard** appears.

- 3. Click Next. The General view of the Capture Engine Configuration Wizard appears.
- 4. Configure the settings in the **General**, **Security**, and **Edit Access Control** views. See *Engine Configuration—General* on page 87; *Engine Configuration—Security* on page 88; and *Engine Configuration—Edit Access Control* on page 90.
- 5. When prompted, click **Yes** to send the configuration changes to the Capture Engine. The configuration changes won't take effect until the Capture Engine is restarted.

### **Engine Configuration—General**

The General view of the Capture Engine Configuration Wizard lets you configure the name, address, capture restart, local disk use, and log settings for the Capture Engine.

General	e Configuration Wizard
Identity Name:	Capture Engine
	ess used to communicate with this Engine le AutoDiscovery ② Use any available IP address IP address: 0.0.0.0
Settings	
Data fo	lder: /var/lib/omni/data/ Browse
Log	max: 200000 records Log adjust: 100000 records
	< Back Next > Cancel Help

- *Name*: Type a name for the Capture Engine. This name appears in the **Capture Engines** window in Omnipeek.
- *Enable AutoDiscovery*: Select this check box to enable the Capture Engine to respond to autodiscovery requests which arrive from the Capture Engine Manager.
- Use any available IP address: Select this check box to accept communications on any and all IP addresses assigned to the computer on which the Capture Engine is installed.
- *IP address*: Select the IP address used to communicate with the Capture Engine. The Capture Engine will respond to communications only on that address. This option is not available when *Use any available IP address* is selected.
- *Port:* Type a port used for communications. The default port is 6367.
- *Maximum concurrent connections*: Type or select the maximum number of concurrent Omnipeek connections allowed for the Capture Engine.
- Automatically restart captures: Select this check box to automatically restart captures whenever the Capture Engine restarts. When enabled, the Capture Engine remembers any capture (active or idle) defined for it, and restores the capture whenever the Capture Engine itself is restarted.
- *Data folder:* Type or browse to the location for the data folder. The Capture Engine uses this location to store packet files created when the *Capture to Disk* option is used. The contents of the data folder appear in the **Files** tab of the Omnipeek **Capture Engines** window.
- Log max: Select or enter the maximum number of records in the application log. These are the log records you see in the Capture Engine log view. You can enter a range between 100,000 to 100,000,000 records (do not include commas). The default is 200000.
- Log adjust: Select or enter the number of application log records that are deleted (the oldest records are deleted first) when the maximum number of log records is reached. You can enter a range between 10,000 to 100,000,000 messages (do not include commas). The default is 100000.

**Note** Setting the *Log max* or *Log adjust* value to a large number of records or messages can slow down the performance of entries written to the log.

## **Engine Configuration—Security**

The Security view of the Capture Engine Configuration Wizard lets you set security and authentication settings.

ecurity Configure sec	urity settings		
Authentication			
	Authentication Or rd-party Authentic		
Enable		Туре	Insert
			Edit
			Delete
			Move Up
			Move Down
Update on	nni-admin passwor	d:	Hide typing
Update on	nni-user password:	:	Hide typing

- Authentication:
  - Enable OS Authentication Only: Select this check box to use the Operating System authentication only, and to disable all other third-party authentication mechanisms.
  - Enable Third-party Authentication: Select this check box to enable third-party authentication using an Active Directory, RADIUS, or TACACS+ authentication server. For more information on enabling Third-party authentication, see *Third-party authentication with Capture Engines* on page 101.
  - *Insert*: Click to display the **Edit Authentication Setting** dialog, which allows you to name the setting and select from one of the following *Third-party Authentication* types:
    - Active Directory: Select this type to enable Active Directory authentication, and then configure the host information: Host (domain controller) and Port settings (Capture Engine (Windows)); or Realm (domain controller) and KDC settings (Capture Engine (Linux)).
    - *RADIUS:* Select this type to enable RADIUS authentication, and then configure the *Host* (IP address), *Port*, and *Secret* settings (select *Hide Typing* to hide the settings) for the RADIUS authentication server.
    - TACACS+: Select this type to enable TACACS+ authentication, and then configure the Host (IP address), Port, and Secret settings (select Hide Typing to hide the settings) for the TACACS+ authentication server.
  - Edit: Click to edit the selected authentication setting.
  - Delete: Click to delete the selected authentication setting.
  - Move Up: Click to move the selected authentication setting higher up in the list.
  - Move Down: Click to move the selected authentication setting lower up in the list.
  - **Note** The order of the authentication settings in the list determines the order an authentication server is authenticated against.

Authentication settings are attempted in groups in a top/down order. For example, if the first setting at the top is a RADIUS setting, then all RADIUS settings in the list are attempted first before attempting the next group type in list. If an authentication server can not be reached because of either an incorrect or unreachable server IP, incorrect port, or incorrect shared secret, then the next setting in the group is attempted. If communication with the authentication server is good, but the user cannot be authenticated because of either an incorrect username, password, or a disabled account, then the next group type is attempted (if authenticating a RADIUS or TACACS+ setting), or the next setting in the list is attempted (if authenticating an Active Directory setting).

**Note** The Capture Engine operates within the security environment configured in the operating system. Refer to your operating system documentation for instructions on configuring security settings for your operating system.

### **Engine Configuration—Edit Access Control**

The **Edit Access Control** view of the **Capture Engine Configuration Wizard** lets you define which users have access to a Capture Engine and which classes of actions (policies) each user is allowed to perform.

**Note** There are several ways to create a new user in your operating system. Refer to your operating system documentation for instructions on creating new user profiles.

Edit Access Control Add/Modify users to system policies		
Use access control		
Add users to the access control list below. members of a domain that the engines car		
Policy	User	-
System: Allow usage		
Capture: Create new capture		
Capture: Delete captures created by others		
Capture: Modify captures created by others		=
Capture: Start/stop captures created by others		
Capture: View packets from captures created by	/ others	
Capture: View stats from captures created by of	thers	
Configuration: Configure engine settings		
Configuration: View the audit log		
Configuration: Upload files		-
		Edit

- Use access control: Select this check box to enable Access Control.
- The *Policy* column lists the predefined policies:
  - System: Allow usage
  - Capture: Create new capture
  - Capture: Delete captures created by others
  - Capture: Modify captures created by others
  - Capture: Start/Stop captures created by others
  - Capture: View packets from captures created by others
  - Capture: View stats from captures created by others
  - Configuration: Configure engine settings
  - Configuration: View/modify matrix switch settings (Capture Engine (Windows) only)
  - Configuration: View the audit log
  - Configuration: Upload files
- The *User* column lists which users have access to a certain policy.
- *Edit*: Select a policy and then click **Edit** to define which users have access to the policy. The **Add Users to ACL** dialog appears:

)omain:	Refresh
Name	Description
root nobody	root nobody
dd User	Add User: Add
elected Users	
	Description
Name	beschpton
	Delete

#### Browse Users

- *Domain*: Type the Domain for the Capture Engine. If the Capture Engine is not a member of any Domain, leave this field blank.
- *Refresh:* Click to poll the Domain controller to retrieve the list of users.

Note Large Domains with hundreds of users may take several minutes to load.

- *Name/Description*: Displays the name and description for each defined user. Both the name and the description are taken from the operating system security settings (local or Domain).
- Add: Click to add the selected user to the Selected Users table.

### Add User

**Note** If the Capture Engine is not a member of any Domain, you can ignore *Add User*.

- *Domain:* Type the Domain for the Capture Engine.
- User: Type the name of the User you wish to add to the Selected Users table.
- Add: Click to add the selected user to the Selected Users table.

### Selected Users

- *Name/Description*: Displays the name and description of users allowed to perform the selected policy.
- *Delete*: Click to remove the selected user from the *Selected Users* table.
- Delete all: Click to remove all users from the Selected Users table.

**Tip** A *Policy* that has no users associated with it is effectively reserved for users with Administrator or root level privileges.

### **Considerations when configuring Access Control**

Please note the following when configuring Access Control:

• Users with Administrator or root level privileges always have access to all features of the Capture Engine.

- If the Capture Engine is installed on a machine under local control, the local user with Administrator or root level privileges (and equivalents) has access to the Capture Engine regardless of the settings in the **Edit Access Control** view.
- If the Capture Engine is installed on a machine under Domain control, the Domain Administrator always has access regardless of the settings in the **Edit Access Control** view.
- When *Use access control* is selected and no other users are added to the **Edit Access Control** view (the initial default settings), then only the user with Administrator (local or Domain, depending on the computer setup) or root level privileges has access to the Capture Engine.

### **Considerations when disabling Access Control**

When access control is disabled, the only restrictions on the use of the Capture Engine are those imposed by the operating system security settings. Examples of relevant permissions controlled by operating system security settings include:

• **Login privilege:** A user must be able to log in to the machine on which the Capture Engine is running in order to use the program.

# **Updating Capture Engine settings**

The Capture Engine Manager lets you distribute settings for filters, alarms, and graphs from one or more connected Capture Engines to one or more selected Capture Engines.

**Important!** You must have Administrator or root level privileges for the Capture Engine where you are distributing settings.

#### To update settings for one or more Capture Engines:

1. Click Update Settings in the toolbar. The Update Settings dialog appears and lists the Capture Engines defined in the Workspace.

pdate Settings	μ×
Items Status	
1. Select engines	
West Coast	
🔲 返 Capture Engine	
Credentials	
2. Add items	
Add items below by dragging them fro	om
respective views from one or more en	ngines.
< III.	•
Delete Delete All	
3. Send updates	
Sta	art

2. Select the check box of the Capture Engines you are updating. You can right-click inside the view to expand all/collapse all lists, or check all /uncheck all Capture Engines.

- **Note** You can click **Credentials** to enter the login credentials that can be used to connect to one or more Capture Engines when distributing software updates or new settings. See *Credentials dialog* on page 97.
- 3. Open the Capture Engine window of any connected Capture Engine in the Workspace and select the **Filters**, **Alarms**, or **Graphs** tab.
- 4. Drag-and-drop an item from the Filters, Alarms, or Graphs tab to the Add items section of the Update Settings dialog. You can add any combination of filters, alarms, or graphs settings.
- 5. Click Start to send the settings to the selected Capture Engines.
- 6. Click the **Status** tab to see the current status of all configuration updates for each target Capture Engine.

ms Status		
Engine	Task Status	
🖑 Capture Engine	The operation completed successfully.	

**Note** To update the settings for a target Capture Engine that has *Use access control* enabled, you must log in either as a user associated with the *System: Allow usage* policy or as a user with Administrator or root level privileges (local or Domain) for the host machine. If the target Capture Engine does not have *Use access control* enabled, any user with read/write privileges to the Data folder directory of the target Capture Engine can use the **Update Settings** dialog.

# **Updating Capture Engine ACL settings**

The Access Control List (ACL) limits access to a Capture Engine by associating *Users* (defined in the operating system) with classes of tasks on the Capture Engine, called *Policies*. These associations are set in the configuration of each Capture Engine.

The Capture Engine Manager also lets you add the same Domain username and Policy associations to the ACLs of multiple Capture Engines, all of which are operating under the same Domain control.

**Note** To use the ACL with Omnipliance Linux, you must first add the user to the Linux OS and then add the same user to the first ACL policy, "System: Allow usage." You can then limit that user's permission by adding the user to any of the other ACL policies.

- **Important!** The Capture Engine Manager must be able to log in to each target Capture Engine as a user with the correct permissions to update the ACL on that Capture Engine, as described above. For detailed login information, see *Credentials dialog* on page 97.
  - **Note** To use the **Capture Engine ACL Update Wizard**, you must present the correct login credentials for each target machine. For a Capture Engine with *Use access control* enabled, any user associated with both the *System: Allow usage* and *Configuration: Configure engine settings* policies can configure the Capture Engine. Any user with Administrator privileges (local or Domain) on the target machine can configure the Capture Engine, regardless of any settings in its ACL.

#### To distribute an ACL update to one or more Capture Engines in a single domain:

1. Click Update ACL in the toolbar. The Capture Engine ACL Update Wizard appears.

2. Click Next. The Select engines view appears and lists the Capture Engines defined in the Workspace.

3. Select the check box of the Capture Engines you are updating. You can right-click inside the view to expand all / collapse all lists, or check all / uncheck all Capture Engines.

- **Note** You can click **Credentials** to enter the login credentials that can be used to connect to one or more Capture Engines when distributing software updates or new settings. See *Credentials dialog* on page 97.
- 4. Click Next to open the Edit Access Control view. From this view, you can associate any User defined for the current Domain with any Policy defined for the selected Capture Engines.

Add/Modify users to system poli	ues		
Add users to the access contro members of a domain that the

#### Browse Users

- *Domain* (Capture Engine (Windows) only): Type the Domain for the Capture Engine. If the Capture Engine is not a member of any Domain, leave this field blank.
- *Refresh:* Click to poll the Domain controller to retrieve the list of users.

**Note** Large Domains with hundreds of users may take several minutes to load.

- *Name/Description*: Displays the name and description for each defined user. Both the name and the description are taken from the operating system security settings (local or Domain).
- Add: Click to add the selected user to the Selected Users table.

Add User (Capture Engine (Windows) only)

- *Domain:* Type the Domain for the Capture Engine.
- User: Type the name of the User you wish to add to the Selected Users table.
- Add: Click to add the selected user to the Selected Users table.

#### Selected Users

- *Name/Description*: Displays the name and description of users allowed to perform the selected policy.
- Delete: Click to remove the selected user from the Selected Users table.
- Delete all: Click to remove all users from the Selected Users table.
  - **Tip** A *Policy* that has no users associated with it is effectively reserved for users with Administrator or root level privileges.
- 6. Enter the name of the *Domain* and click **Refresh**. The dialog will poll the Domain controller to retrieve a list of users.
- 7. Select a user you want to associate with the current Policy and click **Add**. The user will appear in the *Selected Users* table of the dialog. Repeat this step until you have added all the users you wish to associate with the current Policy.
- 8. Click **OK** to close the dialog and return to the **Edit Access Control** view. The users from the *Selected Users* table appear in the *Users* column beside the appropriate *Policy*. You can choose to *Merge* users to the existing Access Control List, or *Replace* the existing Access Control List with a new list defined here.

Edit Access Control Add/Modify users to system policies		
Add users to the access control list below. Note members of a domain that the engines can acco	255.

Configuration: View the audit log		
Configuration: Upload files		
🖲 Merge 🔘 Replace	E	dit

- 9. Continue in this manner until you have fully defined the ACL.
- **10.** Click **Start** to begin distributing the ACL to the listed Capture Engines. The **Send update** dialog appears and displays the task status.
  - **Tip** If at least one task fails, you can click **Retry Failed Tasks** to send the update again to the Capture Engines that did not complete the task successfully.

end update Send ACL update to er	ngines
Successfully sent A	CL update to engines
Task	Task Status
9 10.4.2.53:6367	The operation completed successfully.
	Retry Failed Tasks
	rice y railed rasks

- **Note** In order to be able to retrieve the list of Domain users, you must be logged on as a user with Administrator privileges (local or Domain). Additionally, you must have logged on to a computer under the Domain control of the target Domain during the current session of Windows. Your Domain login can have been as a Domain user of any kind, Administrator or otherwise.
- 11. Click Finish to close the Capture Engine Update ACL Wizard.

### **Credentials dialog**

The **Credentials** dialog lets you present a single set of credentials when you distribute software updates, setting updates, or ACL updates to Capture Engines.

#### To open the Credentials dialog:

- 1. Click **Credentials...** in any of the following views:
  - the Items tab of the Update Settings dialog (see Updating Capture Engine settings on page 92).
  - the Select engines view of the Capture Engine Update ACL Wizard (see Updating Capture Engine ACL settings on page 93).

Credentials			
Use following credentials			
Enter the login credentials that will be used to connect to multiple systems.

OK Cancel Help			

- 2. Select the Use following credentials check box to enable credentials.
- 3. Complete credential information for *Authentication*, *Domain*, *Username*, and *Password*. See *Connecting to a Capture Engine* on page 83 for details.
- 4. Click **OK** to accept your changes.

# **Using Capture Engines with Omnipeek**

Capture Engines have no user interface of their own and rely on an Omnipeek console to provide a user interface through the **Capture Engines** window. The **Capture Engines** window in Omnipeek is used for interaction between Omnipeek and a Capture Engine.

# **Connecting to a Capture Engine from Omnipeek**

In order to view packets and data from a Capture Engine, you must first connect to the Capture Engine from the **Capture Engines** window.

### To connect to a Capture Engine from Omnipeek:

- 1. Do one of the following to display the **Capture Engines** window:
  - Choose View > Capture Engines.
  - Click View Capture Engines on the Start Page.

The Capture Engines window appears and displays the list of currently defined Capture Engines.

**Note** Both Omnipeek and Capture Engine Manager maintain the same list of Capture Engines. Making a change in either program automatically updates the list in the other program.

There are no items	s to show in this view.	

2. Click Insert Engine. The Insert Engine dialog appears.

**Note** You can also click **Discover Engine** in the toolbar to find all of the Capture Engines available on your network segment. See *Discover Capture Engines* on page 86 for details.

	Connect Cancel Help
	Domain: Username: Password:

- **3.** Complete the dialog:
  - *Host:* Enter the IP address of the Capture Engine that you want to connect to.
  - Port: Enter the TCP/IP Port used for communications. The default port is 6367.
  - *Domain:* Type the Domain for the Capture Engine. If the Capture Engine is not a member of any Domain, leave this field blank.
  - Username: Type the Username for login to the Capture Engine.
  - Password: Type the Password for login to the Capture Engine.
- 4. Click **Connect**. When the connection is established, the Capture Engine appears in the **Capture Engines** window.

Tip You can add multiple Capture Engines to the Capture Engines window by clicking Insert Engine.

- 5. Click Insert Group to add a group of Capture Engines to the Capture Engines window.
- 6. Select the Capture Engine group and then click **Insert Engine** to add an Capture Engine to the group.

Insert Group

### **Capturing from a Capture Engine**

You can select from the following options to capture packets from a Capture Engine:

- *New Capture*...: This option lets you create a new capture window based on the capture settings that you define.
- *New "Forensics Capture"*: This option lets you create a new capture window based on pre-configured capture settings optimized for post-capture forensics analysis.
- *New "Monitoring Capture"*: This option lets you create a new capture window based on pre-configured capture settings optimized to produce higher level expert and statistical data in a continuous capture.
- *Edit Capture Templates*: This option opens the **Capture Templates** dialog and allows you to create new or edit existing capture templates.

**Note** For more information about each of the optimized capture formats, please see the *Omnipeek User Guide* or online help.

#### To begin a remote capture from a Capture Engine:

- 1. Do one of the following:
  - On the **Home** tab, select the type of remote capture to perform by selecting *New Capture* under the *Captures* heading.
  - On the **Captures** tab, select the type of remote capture to perform by clicking the small arrow next to **Insert**.
  - On the **Adapters** tab, select the type of remote capture to perform by selecting *New Capture* under the name of the adapter you wish to use.

The remote Capture Options dialog appears.

- 2. Make any desired changes to the capture option settings.
- 3. Click OK. A Capture Engine capture window appears.

- **Note** The views in the left-hand navigation pane that are available in a Capture Engine capture window depend on the type of Capture Engine that is connected, and the *Analysis Options* capture settings configured for that capture window. See the *Omnipeek User Guide* or online help for details on using the features available from Capture Engine capture windows.
- 4. Click Start Capture to begin capturing packets. Start Capture changes to Stop Capture.
- 5. Click Stop Capture when you want to stop collecting packets into the remote capture buffer.

## **Third-party authentication with Capture Engines**

Third-party authentication of Capture Engines allows administrators of Capture Engines to easily manage logon credentials (after a set of Capture Engines have been deployed), without having to make changes on every Capture Engine individually.

Administrators and users can also sign on to Capture Engines with one set of credentials without requiring the same account on every Capture Engine computer. You can use Active Directory, RADIUS, and TACACS+ authentication to maintain logon credentials.

To use third-party authentication, you must first set up third-party authentication on the Capture Engine (using Capture Engine Manager from the Omnipeek computer), and then log in to the Capture Engine from Omnipeek.

#### Setting up third-party authentication on the Capture Engine:

- 1. Start the Capture Engine Manager from Omnipeek, connect to the Capture Engine, and then add the Capture Engine to the Workspace. See *Using the Capture Engine Manager* on page 81.
- 2. Click Configuration to run the Capture Engine Configuration Wizard.

3. When the **Capture Engine Configuration Wizard** appears, click **Next** twice. The **Security** view of the wizard appears.

The **Security** view of the **Capture Engine Configuration Wizard** allows you to configure the third-party authentication settings that allow the Capture Engine to communicate with, and authenticate to, the authentication servers. See *Engine Configuration—Security* on page 88.

### Logging in to the Capture Engine from the Omnipeek computer:

1. From Omnipeek, click Insert Engine in the Capture Engines window. The Insert Engine dialog appears.

Insert Engir	ie	<b>—</b>
Engine		
	Host:	<b></b>
-	Port:	6367
Credentia	ls	
	Domain:	
	Username:	
	Password:	
		Save my password
		Connect Cancel Help

- 2. Complete the dialog:
  - Host: Enter the IP address of the Capture Engine that you want to connect to.
  - *Port:* Enter the TCP/IP Port used for communications. The default port is 6367.
  - Domain: Leave this field blank. This field is not used for Capture Engine (Linux).
  - Username: Type the Username for login to the Capture Engine using the specified credentials.
  - *Password*: Type the Password for login to the Capture Engine using the specified credentials.
- 3. Click **Connect.** The Omnipeek console sends the credentials to the Capture Engine over an encrypted channel.

The Capture Engine decrypts the credentials, and then sends a request to the specific authentication server:

- A negative response will prompt the Capture Engine to send an error message back to the console (Access Denied).
- An affirmative response allows the user to log on.
