Resolved Issue

LS-2433: Fixed issue with lost network setting during TC to Ubuntu migration

Download Links

For customers who want to upgrade to 9.0.x Ubuntu from previous versions (TC or Ubuntu), it is recommended that they upgrade to 9.0.2 version.

9.0.2 has fixed for a lost network setting issue experienced in some customers' environment. If a customer has already upgraded to 9.0.1 and didn't experience the loss of network setting, or has manually fixed the issue, there is no need to upgrade to 9.0.2.

This issue has also been fixed in 9.1.x.
