

# LiveNX 23.4.2

## RELEASE NOTES

### Release Information

- Release Version: LiveNX v23.4.2
- Release Date - Mar 1, 2024
- Release Designation - MD (Maintenance Deployment)

### Build Information

#### Application Version

Server Version:	23.4.2-20240228-508da7d
Web Version:	23.4.2-20240228-24979cc+b15

### Resolved Customer Issues

- LS-3525 - Fixed an issue where incorrect interface speed is being used
- LS-3537 - Fixed an issue where PDFs were not being attached to scheduled report emails
- LS-3543, LS-3566 - Fixed an issue where report templates would be unscheduled when modifications were made to the template
- LS-3557 - Fixed an issue where LiveNX was crashing due to running out of memory
- LS-3559 - Upgraded web server libraries to fix a communication issue between processes
- LS-3546 - Improved Cisco SD-WAN report performance and ensured reports can be cancelled to conserve resources
- LS-3579 - Fixed issues with device management causing unwanted changes in site IP mappings and interface semantics

### Bug Fixes

- Fixed an issue where dashboards would not auto-refresh
- Fixed a memory leak related to alerts
- Fixed an issue where `flow.ip` would did not support the `!=` operator
- Fixed an issue where interfaces can not be added to non-SNMP devices
- Fixed an issue where the Flow Path Analysis story was not coloring cells correctly when exceeding thresholds
- Fixed an issue where incorrect interfaces would be selected when discovering multiple devices
- Fixed an issue where site IP mappings were being overridden after adding a device to a site
- Fixed an issue where interface settings were being copied to other interfaces when bulk editing interfaces
- Fixed an issue where you could not copy paste IP ranges into the device discovery input
