

LiveNX 25.2.2

RELEASE NOTES

Release Information

- Release Version: LiveNX v25.2.2
- Release Date - Sep 24, 2025
- Release Designation - MD (Maintenance Deployment)

Build Information

Application Version

Server Version:	25.2.2-20250923-bd2653d
Web Version:	25.2.2-20250923-57a5a13+b18

- Java Version: 21.0.5
- Ubuntu Version: 22.04

Enhancements

- Added separate report queue for fast reporting supported reports so they are not blocked by slower reports

Bug Fixes

- Fixed an issue where devices without sites could not be migrated between nodes
- DST time zone support is now enabled by default for time zones that support DST
- Made max segment size configurable for snmpstore and alert store
- Fixed an issue where users are unable to drill into the flow path analysis path view from entity pages
- Fixed an issue where clicking "device details" on an entity page topology would not navigate to the selected device entity page

Customer Issues

- PM-11795 - Fixed an issue where Cisco Catalyst SD-WAN polling would not reauthorize if session was timed out
- PM-11817 - Fixed an issue where the alert CSV export device and site names were not included
- PM-11914 - Fixed an issue where device management page would freeze when loading a large number of devices or interfaces
- PM-11985 - Fixed an issue in Engineering Console system topology, where subnet cloud is immovable if located over an expanded group
