

LiveNX 21.5.2 Release Notes

Release Information

- Release Version: LiveNX v21.5.2
- Release Date - Dec 21, 2021
- Release Designation - MD (Maintenance Deployment)

Build Information

Application Version

Server Version:	21.5.2-20211219-c7bd3f3
Web Version:	21.5.2-20211218-d9414d3ac0+b7

Resolved Customer Issues

- LS-2887: A special tag "agg" can now be used on interfaces to force raw data to be utilized in report aggregation
- LS-2979: Fixed an issue on the Engineering Console which occasionally prevented users from navigating to the flow reports from the device tree context menu
- LS-3009: Fixed an issue where incorrect units were being shown for SDWAN jitter and network delay alert configuration

Bug Fixes

General

- CVE-2021-44228, CVE-2021-45105, CVE-2021-45046 also known as "log4j" has been patched through an upgrade to log4j 2.17
- Fixed an issue where logs could not be downloaded via clients
- Fixed an issue where users are unable to "delete all" notifications at scale
- Underscores are now supported in LDAP server configurations

Reporting

- Fixed an issue where the flex filter would be ignored for some SNMP reports
- Fixed an issue where the custom reports page would not load on the Operations Dashboard under certain scenarios
- Fixed an issue where custom report configurations would change after saving when selecting certain combinations of parameters. This primarily affected custom reports with the AVC flow type.
- IP SLA story will now show a "-" instead of "null" when there is no data for an ICMP Jitter test
- Custom reports can no longer be edited or deleted by users with the role "View"

Alerting

- Alert notifications will now appear for users authenticated with single sign on (SSO)
- Fixed an issue where SDWAN alerts were not being properly resolved within LiveNX when they were resolved on the vManage system
- The "Device, Interface" filter will now work as intended on the alert management page
- Alerts will show both the initial value that triggered the alert as well as the latest value for all KPI metrics
- Fixed an issue where some legacy systems were unable to modify alerts

Licensing

- Fixed an issue where users could not activate traditional licenses with a grace period
- Fixed an issue where users would be presented with invalid operations for traditional and cloud licenses
- Fixed an issue where no error message appears when invalid key/secret is input when activating a cloud license
